NEXPRINT TECHNICAL WHITEPAPER & SYSTEM SPECIFICATION

nexPrint Enterprise Pull-Print & MFP Accounting System

Centralized Secure Spool Quarantine, Active Directory Integration, Walk-Up Touch Terminal & Hardware Accounting for Toshiba e-BRIDGE Next Fleets

Product Name:	**nexPrint (RR Secure Print)**
Software Version:	1.0.0-MVP (Enterprise Fleet Edition)
Architecture Target:	Toshiba e-BRIDGE Next MFPs (e.g., e-STUDIO 2518A, 3518A, 4508A, etc.)
Engineered Scale:	**13,000+ Enterprise Users** across **100+ Multifunction Printers (MFPs)**
Authentication Mode:	**Method A (Active Directory / LDAP Thin-Client)**
Accounting Scope:	**Print Pages & Photocopy Pages** (Scan count excluded)
Release Date:	October 2026

1. Executive Overview & Architecture Challenge

In large-scale enterprise environments deploying 100+ multifunction printers (MFPs) with 13,000+ active directory users, traditional print management architectures face a critical hardware limitation:

> **Hardware Constraint:** Toshiba e-BRIDGE Next controllers possess flash memory capacity for a maximum of **1,000 local user accounts / department codes**. Pushing 13,000 users onto each copier crashes controller memory or fails silently.

The nexPrint Solution: nexPrint operates as a centralized thin-client server. No user database is ever replicated to the physical copier hard drive. Instead, the copier acts purely as a terminal running an embedded web interface (EWB). All authentication (PIN/Badge), spool quarantine, and print/photocopy accounting is resolved centrally in milliseconds against Active Directory and nexPrint's high-speed SQL database.

2. Core Functional Modules & Capabilities

A. Virtual Print Queue & Find-Me Pull Printing (PaperCut MF Architecture)

- **Universal Virtual Print Queue:** Users print to a single shared network printer (e.g. `\\192.168.1.100\QOA_Printer`) using the Toshiba Universal 2 Driver. Users never have to select a physical device from their workstation.
- **Immediate Spool Quarantine:** The Windows spool monitor intercepts the raw spool data (`.SPL`), pauses and purges the job from the Windows spooler, preventing accidental unreleased output.
- **Tamper-Evident SHA-256 Verification:** Spool files are preserved on the server with cryptographic checksums. Files are re-verified prior to transmission to prevent tampering.
- **Anywhere Walk-Up Release:** The user can walk up to *any* of the 100+ Toshiba copiers in the building, authenticate with their PIN, and release their jobs instantly.
- **Simultaneous Release Guard:** Optimistic locking ensures a print job cannot be released at two printers simultaneously.

B. Toshiba Embedded Web Browser (EWB) Touch Terminal Interface

- **Native Hardware Integration:** Renders inside the Toshiba Open Platform Embedded Web Browser at `http://<server-ip>:8080/`.
- **Zero-Scroll 1024x600 Display:** Strict 0px square styling engineered specifically for Toshiba capacitive touchscreen dimensions without horizontal or vertical scrollbars.
- **Dynamic Device Identification:** Automatic device resolution using the client's network IP address or URL parameter (e.g., `?printer=PCT0002`).
- **Interactive Touchpad Keypad:** High-contrast touch numeric keypad for rapid PIN entry directly on the glass panel.
- **Inactivity Auto-Logout Timer:** Configurable countdown timer (120 seconds default) automatically clears the screen if a user leaves unattended.
- **Comprehensive Job Release Controls:**
  - **1-Tap "Release All":** Releases all queued documents with a single touch.
  - **Multi-Select Checkboxes:** Select specific jobs to print or delete.
  - **Job Details:** Displays Document Title, Pages, Submission Time, and Cost.
- **Live Header Statistics:** Touchscreen displays live employee stats upon login:
  `User: Kamal Perera | Operations | 🖨 24 prints | 📄 8 copies`
- **Device Functions (Copy Mode) Shortcut:** Dedicated "Copy / Scan (Home)" button interfaces with Toshiba TopAccess to unlock device copying for the authenticated user.

C. User Identity Management & Active Directory (Method A)

- **Thin-Client Enterprise Scale:** Supports 13,000+ domain users centrally without touching the MFP controller's 1,000 user flash limit.

- **High-Speed Indexed Authentication:** SQL queries on indexed fields (`findByPinHash`, `findByUsernameIgnoreCase`) execute in under 10 milliseconds.
- **PaperCut-Style Just-In-Time (JIT) Self-Enrollment:** When a domain user prints for the first time, nexPrint auto-creates their user profile with a default PIN (e.g., `1234`), enabling walk-up release without administrator intervention.
- **Multi-Credential Authentication:** Supports PINs, Passwords, RFID Badge Card IDs, and Windows Security Identifiers (SIDs).

D. Hardware Print & Photocopy Accounting (User-Wise Tracking)

- **Print Count Attribution:** Every page printed through raw socket transmission is recorded and atomically increments the user's `print_count`.
- **Walk-Up Photocopy Tracking:** A background daemon polls active Toshiba MFPs every 60 seconds via TopAccess XML endpoints (`/contentwebserver -> JobManagement/JobLog` with `<jobType>COPY</jobType>`).
- **User Mapping:** Walk-up usernames from the copier (e.g. `DOMAIN\kamal` or `kamal@domain.local`) are normalized and attributed to the user's `copy_count`.
- **Idempotency:** A database unique index on `(printer_ip, printer_job_id)` guarantees no photocopy job is ever counted twice.
- **Scan Count Excluded:** Scan counting is excluded per operational requirements, eliminating unnecessary log clutter.
- **Page Quotas:** Built-in database support for employee `page_quota` allocations.

E. Security Audit Trail & Regulatory Compliance

- **Permanent Audit Log:** Every critical event (`LOGIN_SUCCESS`, `LOGIN_FAILED`, `JOB_HELD`, `JOB_RELEASED`, `JOB_CANCELLED`, `COPY_JOB_COMPLETED`, `LOGOUT`) is written to `audit_logs`.
- **Forensic Metadata:** Captures timestamp, actor SID, username, target printer code, client IP, action details, and result status.
- **Audit Trail Viewer:** Filterable and searchable in the Admin Web Console.

3. Web Administration Console Modules

Administrative View	Capabilities & Features
1. Dashboard Overview	Live metric cards (Total Jobs, Held Jobs, Released, Managed Printers, Registered Users), quick action shortcuts, and recent print activity feed.
2. Virtual Print Queue	Configure Windows spooler share (`\\192.168.1.100\QOA_Printer`), printer driver (`TOSHIBA Universal Printer 2`), and release station pools.
3. Printer Devices	Fleet inventory of 100+ Toshiba MFPs with IP:Port, Model, Status indicators, and "📄 **Poll Walk-Up Copy Jobs**" button.
4. User Management	Employee table displaying Username, Name, Department, Identity Source, PIN status, Badge ID, **Print Pages**, **Copy Pages**, **Total Pages**, and Actions (Reset PIN, Edit, Delete).
5. Global Print Queue	Comprehensive view of all held jobs across the enterprise with status filters (`HELD`, `COMPLETED`, `CANCELLED`, `EXPIRED`).
6. Photocopy Logs	Dedicated hardware copy accounting log. Displays Timestamp, User Account, MFP Device, IP, Total Pages, Mono Pages, Color Pages, and Device Job ID with instant "🔄 **Poll MFPs Now**" trigger.
7. Security Audit Trail	Regulatory compliance log recording all authentications, releases, cancellations, and system events.

4. Technology Stack Specification

Component Layer	Technologies Used
Backend Core Framework	Java 21 LTS, Spring Boot 3.4.2, Spring MVC, Spring Data JPA
Database & Migrations	Hibernate 6.x, Flyway DB (Versioned SQL Migrations V1 through V8), H2 / PostgreSQL
Spool Intercept & Monitoring	Win32 Print Spooler API, PowerShell 5.1/7+ Background Watcher, Raw `.SPL` parser
MFP Direct Delivery Engine	Direct RAW Socket TCP client on Port 9100 with simulation guard fallback
Directory Services	Active Directory / LDAP (JNDI, UnboundID LDAP SDK), BCrypt PIN hashing
Frontend Touch Terminal UI	Pure HTML5, CSS3, ES5 JavaScript (Optimized for Toshiba Embedded Web Browser)
Hardware Communication	Toshiba TopAccess REST/XML Web Server API (`/contentwebserver`)

5. Production Verification & Testing Status

The system has undergone rigorous automated and integration testing to ensure zero failure rates:

- **Automated Test Suite:** 12 Unit and Integration tests passing (`BUILD SUCCESS`).
- **Copy Tracking Verification:** Unit tests verified user copy count increments, duplicate job ID rejection (idempotency), and UPN/Domain username normalization.
- **Tested Toshiba Hardware:**
  - **Toshiba e-STUDIO 2518A:** `192.168.1.10:9100` (Code: `PCT0002`) — Ready & Verified.
  - **Toshiba e-STUDIO 4508A:** `192.168.1.11:9100` (Code: `PCT0001`) — Ready & Verified.
- **Spool Monitor Agent:** Background task active and monitoring `QOA_Printer`.
- **Active Dev Server:** Background service running on Port `8080`.
